SkyVoice IP Facsimile & VoIP Solution

Communicate with the world

The SkyVoice SF7000 series FTA is the first device to solve your persistent IP communications problems. The SkyVoice provides:

- ❖ **Superior quality voice calls**
- ❖ **Minimal bandwidth usage**
- ❖ **Reliable faxing each time; every time**
- ❖ **Up to 8 ports of VoIP or Fax**
- ❖ **120/12V power**
- ❖ **1"x 4"x 8" compact transportable size**

The SkyVoice eliminates any risk of eavesdropping or message interception by applying advanced encryption technology to all traffic.

VoIP In the past, customers had the dubious choice between call quality and bandwidth usage when selecting a VoIP solution. The SkyVoice device delivers VoIP audio quality equal to major telephone companies at fractions of the bandwidth required. Increase the number of lines running over a system and our bandwidth economy really shines! SkyVoice calls automatically traverse NAT at the firewall (unlike SIP, which requires additional procedures to NAT), simplifying setup and administration. Our VoIP system is so efficient; the savings on bandwidth alone could cover the cost of the VoIP service.

Fax Studies suggest that 1/3 of all IP faxes fail. Over satellite, fax is even more unpredictable based on the quality of the satellite link. The SkyVoice device uses proprietary technology to send and receive fax over any network. Successfully. 100% of the time. Despite the network being optimized for VoIP or not. Regardless of packet loss, jitter or latency. Use a standard fax machine attached to our device and press send. It really is just that simple. Never resend a fax with the SkyVoice unit.

The SkyVoice works equally well over Broad Sky's Enterprise satellite service cellular, Wi-Fi, and Wi-MAX making it the logical choice for all your remote communications needs.
